about us

More than 30 years of experience make us a perfect partner for your projects. Whether you are opening up to new markets, planning a own logistics department or would like to restructure your existing supply chain – we work out a fitting solution for you and accompany the implementation.

We consider ourselves an independent logistics company. Founded in 2014, we worked our way to a transport and logistics company with a brand new own fleet. To complete our offers and services we cooperate with experts from near business fields.

Our vision: to shape transport and logistics as efficient and transparent as possible. With that, a sustainable way of dealing with both clients and the environment is our core value.

project logistics

Our core competence.

Difficult projects are our chance to deliver.
We analyze, evaluate and plan any given circumstance ahead, including the calculatory evaluation as well as the necessary customs and tax proceedings.

Even in Europe, there exist regions that might not be able to be supplied all year round.
To keep you free, we provide the selection of transport modes, routes and transport periods.

consulting

Independent consulting for your success.

Supply chain optimization is key to efficient processes – especially in logistics. We advise you regarding possible changes on both operations and strategic planning.

We act as an independent consulting firm and thereby distinguish ourselves from pure transport processing.
